Project title : women alert AI

Project Link : <https://my-site-590z3jnt-pravalikasasupalli.wix-vibe.com/>

PROJECT DESCRIPTION :

Women Alert AI is an intelligent safety alert system designed to provide immediate assistance to women during emergency situations. The project uses artificial intelligence to detect danger, send instant alerts, and share the user's live location with trusted contacts. The system aims to reduce response time and ensure quick support when a woman feels unsafe or is unable to call for help.

The platform continuously monitors unusual movements, voice signals, or emergency triggers and identifies the level of threat. Once an emergency is detected, the system automatically sends an SOS message along with the user's real-time location to pre-registered contacts. This ensures that help reaches the user as fast as possible.

Women Alert AI focuses on simplicity, speed, and reliability. The interface is easy to use, making it suitable for all age groups. The project highlights how modern AI technology can be used for women's protection and emergency response.

Overall, Women Alert AI is a smart, effective, and technology-driven solution created to enhance women's safety by providing continuous monitoring, intelligent detection, and instant emergency alerts.

THANK YOU IBM
